Bahrein produces dates of very good quality, though inferior to the Iraqi and especially to the Persian variety known in the United States as the Bassorah date. The entire date production of Bahrein is consumed locally, either fresh or dried, or in a powder which is used like wheat flour for the making of bread, the common food of the rich.

The economic value of the date palm does not stop with the fruit. All other parts of the palm yield products of practical value to Bahreinis; their life would be impossible without it. The trunk furnishes timber for houses and boats; the midribs of the leaves go into crates and furniture; the leaf bases are used for fuel; the small leaves are used in basketry, the fiber for cordage and packing, and the fruit stalks for rope and fuel.

Under the shade of their palm trees and around their springs, the Bahreinis live their relatively simple life, producing some vegetables, weaving a few shawls, making sailcloth or reed mats, and breeding their donkeys. The Bahrein donkeys, or "Bandari," were bought by donkey lovers for their endurance, their height, and other celebrated qualities.

The main occupations of the townspeople are commercial and maritime, mostly fishing and handling the transit shipments which are one of Bahrein's largest sources of revenue. The greatest economic asset of the islands, however, despite the value of the recently discovered oil, is still the pearl fisheries.

PEARL FISHING

The chief source of income of the islands before the discovery and exploitation of oil reserves in the nineteen thirties was pearl fishing. Before the rise of competition from the Japanese pearl fisheries and worldwide economic crisis of 1930, the industry employed more than 20,000 persons annually, and revenue from the pearls, which were exported principally to Paris and London, amounted to about £2,000,000[1] annually. Single pearls often bring enormous prices; for example, the most beautiful
